Developing Web Services

Project
Worth: 30%

Due: August 6th 2018 11am

Late assignments are not accepted.

This is a team project, at least 1 team member must upload a copy of your project along with any other required files/documentation to the assignment section on Lea.

Include a file with all the team members names.

Each team member will be asked to hand in an evaluation for each team member. Your team members evaluation of your work will count towards your individual grade.

1. Your group project will consist of consuming at least 2 different Web Services / API
2. These web services should be used together to create a web page with information that contains a mix of both web services
3. You are expected to create at least one webpage to display your web services usage
 - i. You are allowed to create more if you feel it is required
4. During class on Monday August 6th, your team will present your web site and you are expected to use PowerPoint slide(s) to detail information about the web services you have selected

Notes:

Should your project require API keys, these should be saved in a separate file so that it can be easily tested using different keys without having to go dig inside your code to find them

You are permitted to use any language for this project so long as you produce a webpage
